Valley True Blue: 8:30am – 8pm

Weather: Partly sunny with highs in the low 30's

Conditions: Machine groomed packed powder

Today's trivia – What is the approximate increase in volume when fresh water turns to ice?

In general, a given volume of liquid water at room temperature will increase in volume by about 9.05% after freezing. The solid phase of water is LESS dense than the liquid phase. This is a highly unusual material property and shared by very few other materials.
