Conditions: Machine groomed packed powder

Today's trivia – Which bird migrates from the Arctic to the Antarctic each year?

The Arctic tern. This remarkable journey can cover a distance of about approximately 44,000 miles annually. The migration from the Arctic to the Antarctic and back again takes about 9 months, as the Arctic tern experiences two summers per year and enjoys more daylight than any other creature on the planet. This extensive travel not only highlights the bird's incredible endurance but also its remarkable navigation skills, traversing vast oceans and continents each year.
